All Causes	180 / 627 (29%)	55 / 582 (10%)	236 / 1209 (19%)

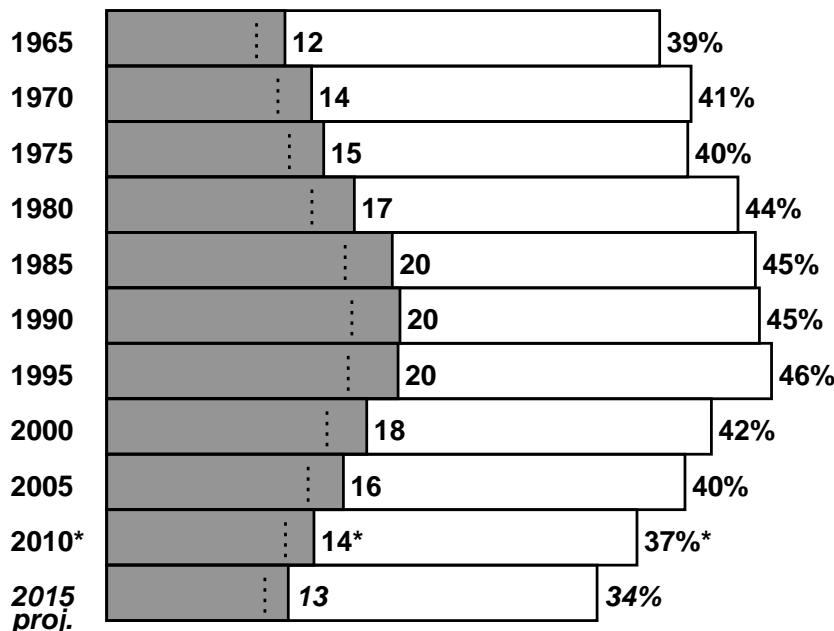

## 1965-2015: EU13 recent (European Union - 13 countries)

## Population risk of dying at ages 0–34

## Population risk of a 35-year-old dying at ages 35–69 from smoking (shaded) or from any cause (shaded and white)

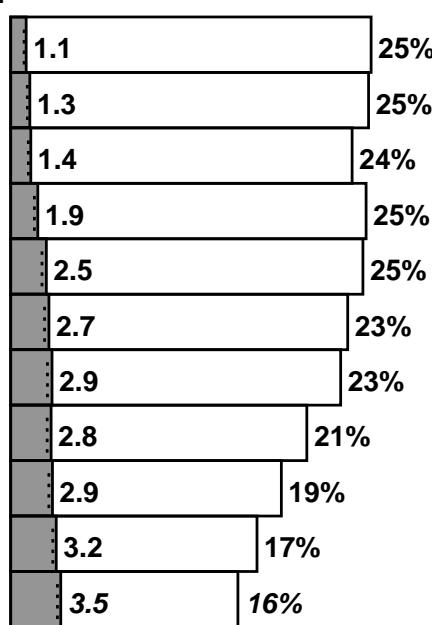

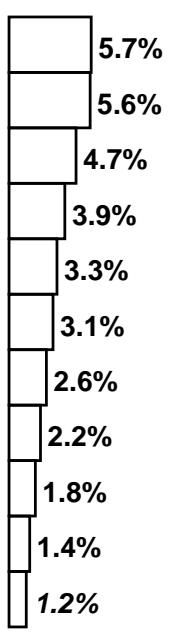

## MALE

\*eg, at year 2010 male death rates, out of 100 men aged 35, 37 would die before age 70 (with 14 of these deaths attributed to smoking)

Note: Most of those killed by smoking would otherwise have survived beyond age 70, but a minority (shaded area to right of dotted line) would have died by 70 anyway

## FEMALE

**EU13 recent (European Union - 13 countries): 1960-2015*****Relative importance of deaths in MIDDLE age (35–69), 2015 projections***
